Hardest sudoku puzzle in the world

FlowDoku is a Sudoku style Windows Phone 8 puzzle game. Instead of creating numbers in a particular sequence, FlowDoku presents you with a series of colored squares, triangles, diamonds, and circles that you need to pick out. The game has over two hundred puzzles to solve that span five difficulty levels and four puzzle sizes. FlowDoku has a simple design, simple user interface and challenging puzzles. Even the easy puzzles can be on the challenging side. FlowDoku makes a nice first impression and is an attractive Windows Phone puzzle game. In the main FlowDoku menu, you'll find options to play the game, view the information screens (help, stats, credits, etc.) and access the game's settings. Settings cover the usual sound/music on or off, as well as an auxiliary setting that will highlight your resolution errors. FlowDoku also offers a choice between a light and dark theme in the settings. When you start a new game, you have to make a few choices before you jump into the game. FlowDoku has four puzzle sizes; 6x6, 8x8, 9x9 and 12x12. From there you choose your difficulty level which ranges from very easy to evil depending on the puzzle size. The game is quite simple in that time you have a series of shapes displayed at the bottom of the game board. Each row, column, and box of the game board must contain these shapes. In each box, matching shapes must be next to each other, but not in rows and columns. If you have the Show Errors option in the settings enabled, any errors in columns or rows are highlighted. As for scoring, puzzles are basically pass/fail with FlowDoku, but you do have a game timer to record how quickly you solve things. If situations arise and you have to leave a game before solving the puzzle, FlowDoku will save your progress so that you can pick things up again later. FlowDoku has over two hundred puzzles with the free version to keep you busy. When you exhaust those puzzles, you can use gems earned by playing the game (or being purchased in-app) to unlock additional levels. In addition, if you want to skip the gem route, you can also buy the extra levels via in-app purchase. As a bonus, the ad banners are removed when you make an in-app purchase. The in-app purchases are located outside the main menu under the info option. Just choose the Turn off Ads button to get your purchase options. Additional levels per difficulty level will run you \$.99 for 200 puzzles per level and you can buy the full collection of add-on puzzles for \$5.99. All in all, FlowDoku is an entertaining, challenging game. With the large number of puzzles included in the free game there is enough gaming to keep you busy. When you complete these levels, you expand the number of levels with the gems you or via in-app purchases. If you are looking for a challenging puzzle game or just a new game to help you pass the time with, take a look at FlowDoku. The first game is free, ad-supported and and for Windows Phone 8. Get your copy of FlowDoku here from the Windows Phone Store. Sudoku, which comes from developer Babaroga and publisher Microsoft, is one of the first two free ad-supported games for Xbox Live. It is currently only available in the US, but it will probably debut in countries in the distance eventually as well. There are a ton of different sudoku games on Windows Phone already. This version is certainly not definitive, but it's a pretty good way to get some free achievements. Go past the break for our full review. Sudoku is a kind of logical puzzle that became popular in the mid-2000s. Hopefully everyone has played it by now. If not, then here's Wikipedia's description of the game: The goal is to fill a 9x9 grid with numbers so that each column, each row, and each of the nine 3x3 sub grids that put together the grid (also called boxes, blocks, regions, or sub-squares) contains all digits from 1 to 9. The puzzle setter offers a partially completed grid, which usually has a unique solution. Completed puzzles are always a kind of Latin square with an additional restriction on the content of individual regions. For example, the same integer should not appear twice in the same 9x9 game board row or column or in any of the nine 3x3 subregions of the 9x9 game board. It's exciting, isn't it? Don't worry if it sounds confusing - the game has a simple training mode to help beginners pick up the basics. Game Types Sudoku offers two ways to play: Classic and Lightning. Classic is the standard game of sudoku. There are four levels of difficulty. The higher the difficulty level, the more experience is allocated to complete each puzzle. There is no time limit and longer puzzles can be saved and resumed later. Lightning is Babaroga's unique Sudoku. Players start with a certain number of points, which are then constantly ticking. If they reach zero, the game ends. Filling out boxes correctly adds some points, keeping the game going. Filling in more than one box within a short time increases a score multiplier, helping even more. Because of the short window for keeping the score multiplier going and the timed natural in general, Lightning mode doesn't really give players much chance to pencil in numbers like they normally would when solving a puzzle. Still, the sense of urgency and extra XP will make Lightning more attractive than Classic for some gamers. Progression The puzzles here are randomly generated. I like random puzzles much less than the 100 hand-designed puzzles included in each of Nintendo's Brain Age DS games. Nevertheless, Babaroga's Sudoku has a progression system that connects the whole experience. Experience earned completing (and even giving up) puzzles helps a level up, raising their rank. It is similar to the system used in Gamechest: Logic Games, except that this game requires dramatically less grinding to reach the highest rank. I would say the number of levels and experienced need to win win here's just right. Leveling up also unlocks new power-ups and features associated with them. Power up your brain Sudoku doesn't traditionally involve power-ups - after all, it started out as a pen-and-paper game. But power-ups add a unique flavor to this version and make it a little more accessible to less experienced players. The most useful power-ups are Pencil All (pencils in every possibility, which can save a lot of time), Lucky (fills a number in each 3 x 3 sub-grid), and raise the two that XP earned, XP Bonus and Gamble. At first, players can only bring a single power-up into a game, but eventually the number rises to five, I mean, three. Most power-ups require tokens to use, so you don't just burn through a million puzzles in a row with the better ones. Tokens are refilled over time and refilling fills them immediately. Metro 'doku In making the 'official' sudoku game of Windows Phone, Babaroga sticks closely to the basic Metro UI design. Swiping left or right from the main menu switches between four different pages: Dashboard, Classic, Lightning, and Power-ups. In the dashboard you can view your XP and progress towards leveling up, as well as your Xbox Live avatar. Behind each page of the main menu is a stock photo, which can be easily switched to a photo from the player library in the Help & Options menu. The sudoku board itself consists of a colored grid that matches the user's phone setting on a black background. It's not super pretty, but still looks better than some indie sudoku games. Pen and pencil can be easily enabled by tapping the large icon in the upper-right corner of the screen. Tapping a box selects it and dialing numbers from a row at the bottom of the screen. There are two problems with this approach. First, there is a small but noticeable delay between selecting a box and being able to select a number. This is most annoying in timed Lightning mode, but really there is no excuse for input lag in a simple game like sudoku. Secondly, the numbers at the bottom are actually kind of small and I sometimes ended up selecting the wrong one by accident. It's not very difficult to enter numbers, but I would have preferred a better system. On the plus side, toggling between pen and pencil is as simple as tapping the large icon in the upper right corner of the screen. Silent but deadly Sudoku does not have music, which is fine in a game of this type, especially a free game. However, the sound effects may be better. The one who plays when completing a puzzle is particularly limp and noodle-like. Sudoku's Performance 8 Achievements Are Only Worth 50 GamerScore Instead the standard 200. Since the game is free and they are all easy to earn, there is no reason to complain. The only achievement that presents each challenge is Gotta play 'em all, which requires players to complete a puzzle of each type in both classic and Lightning modes. Fortunately power-ups make the higher difficulty puzzles free free Overall impression at \$2.99, Sudoku would be too light on the contents and pools to be worth it. The input lag, small hit boxes on the numbers, and unexplained loading times all hold it back a bit. But hey, I can forgive a few rough edges in a free game that includes Xbox Live Achievements -- as long as it's fun. The puzzle solving gameplay here certainly qualifies as fun. The leveling system and power-ups add welcome addictiveness and accessibility that some other sudoku games lack. I still hope that a perfect sudoku game will come to Windows Phone one day, but this version makes the wait much easier. Sudoku is only available in the US. Grab it here (Zune link) on the Marketplace. Market.
